

Campfire Play Set

assembly instructions

1 Thread the shorter, 1m length piece of string through the holes at the top of the poles, leaving a clear length of string at one end

2 Tie the tops of the poles together, letting the long length hang down (if the structure wobbles too much, tie your knot more tightly, if the legs can't splay out, loosen the knot)

3 Tie loops in the long length of string - this allows the S-hook to be placed at various heights

4 If you are placing your Campfire Set on a slippery floor thread the longer piece of string through the holes in the bottoms of the poles and tie it to stop the legs splaying out too far

5 In the center of the poles build a pretend fire using the pieces of wood

6 Put the S-hook through a loop and hang your cauldron over the fire at the desired height.

This set is a collection of loose parts and is not a toy. Children should be supervised while using it.

The cauldron is made of plastic - **DO NOT** put heavy weights into it or use over a real fire.
